

AHMAD M. FAYYAS

Mobile Engineer — Flutter & Native iOS

Dubai, United Arab Emirates • +971 58 529 5849 • ahmadfayyas101@gmail.com
linkedin • github • stackoverflow • medium

SUMMARY

Mobile engineer with 12 years building consumer applications, currently on talabat's platform team building the design system consumed by every product team across Flutter and a server-driven UI architecture. Five years at talabat across five product domains, preceded by seven years of native iOS — through the native-to-Flutter migration from both sides, with the depth to work below the framework when a problem calls for it. 31.8k Stack Overflow reputation with gold badges in Swift and iOS, plus published technical articles on Flutter, Dart and Swift. Native Arabic speaker with experience on Arabic-language, right-to-left products.

TECHNICAL SKILLS

Languages & Frameworks	Dart, Flutter, Swift, Objective-C, UIKit
Platform	Server-Driven UI (SDUI), Backend-For-Frontend (BFF), design systems, cross-team component and API contracts
Architecture	Clean Architecture, Modularisation, MVVM, VIPER (iOS)
State & Data Flow	BLoC / Cubit, Riverpod, Provider, Stacked, Dependency Injection, service locators (GetIt, Swinject), repository pattern
Device & OS	Method channels, background location and geofencing, local and push notifications (FCM / APNs), deep linking, background processing
Quality	TDD, Unit, Widget, Integration, Golden and End-to-End Tests; Code review, Linting, Code coverage
Delivery & Observability	CI/CD, Fastlane, App Store and Play Console, staged rollouts, feature flags; Crashlytics, Flutter DevTools and Xcode Instruments profiling; crash-free rate, ANR, cold start and frame-rendering budgets

EXPERIENCE

Software Engineer — Mobile

Sep 2021 – Present

talabat (Delivery Hero) — Dubai, UAE • MENA's largest on-demand delivery platform; one consumer app spanning multiple product domains

- Platform team (current): build and maintain the design system consumed by every product team company-wide, spanning Flutter and a server-driven UI (SDUI) / backend-for-frontend architecture — setting the component standards other teams build on, reviewing their contributions, maintaining the contribution guidelines and component documentation they work to, and carrying on-call for the issues they raise.
- Delivered across five product domains in five years — post-order experience, vendor quality / ratings and ranking, food discovery, paid subscriptions, and platform — having worked through talabat's native-to-Flutter migration since day one, after two years on native iOS.
- Shipped the order tracking experience (live order status driven by data polling and state transitions) plus the ratings components and reusable discovery components including vendor cards.
- Worked beyond the client boundary to unblock delivery: implemented the SDUI layer on our BFF in C# rather than waiting on another team's queue, and built reusable AI agent skills that standardise backend project setup, turning ad-hoc AI usage into a repeatable workflow.
- Owned end to end a geofence-based country-change feature delivering local notifications while the app is not running: background location, platform-specific scheduling and native integration on both platforms.
- Informed feature decisions with both quantitative and qualitative evidence — A/B tests, user metrics and 1-to-1 user interviews — and led rollouts end to end from pilot experiment to 100% external deployment.
- Improved Agile practice within my squads: restructured ceremonies, coached the team on running them properly, and adapted the process to what the team needed rather than the textbook.

Senior Software Developer — iOS

Sep 2018 – Sep 2021

Aspire IT Services (now part of the Astek Group) — Amman, Jordan • digital consulting and engineering partner to clients across MENA and the US, including WeightWatchers

- Led end-to-end development of new features for the WeightWatchers (WW) iOS app — a top-tier US consumer health product — architecting solutions for a multi-million user base, as part of Aspire's engineering partnership.
- Worked directly with WeightWatchers' teams in Agile ceremonies and backlog refinement, translating high-level product requirements into actionable user stories and development estimates.

- Profiled and optimised application performance, and resolved production defects affecting function and usability.

iOS Technical Lead

Aug 2016 – Aug 2018

Genie9 / Zoolz — Amman, Jordan · cloud backup and storage products used by 100,000+ businesses

- Defined the architecture for the core components of the company's iOS applications.
- Led a team of 5 engineers: allocated work to avoid conflicts and keep parallel workstreams moving, and tracked progress against deadlines.
- Served as the central point of contact for stakeholders, aligning engineering, management, product, UX, QA and external clients by translating complex technical detail, and evaluating technology choices and practices to develop the team.
- Mentored and onboarded new engineers, coaching them on specifications, design targets and development process.

iOS Developer

Mar 2016 – Aug 2016

OpenSooq — Amman, Jordan · one of MENA's largest online classifieds marketplaces

- Analysed requirements with stakeholders for a new large-scale commerce concept, and built features for a high-traffic consumer marketplace.

iOS Developer

Oct 2014 – Mar 2016

UBA (United Business Applications) — Amman, Jordan · enterprise software house delivering ERP, CRM and HR systems; Sage's largest partner in the Middle East

- Owned end-to-end development of native iOS applications for agency clients, from concept through App Store submission.
- Developed reusable iOS components and custom native interfaces, and resolved production defects.

SELECTED FREELANCE ENGAGEMENTS

iOS Senior / Lead Engineer — iSpectra, Amman (Aug 2018 – May 2020) · *Enterprise CMS and digital-experience consultancy (Drupal, Sitecore, Liferay).*

Primary technical lead and communication bridge between iSpectra and outsourced engineers, hands-on across the codebase — owning the mobile lifecycle from requirements through implementation, release cycles and App Store distribution.

iOS Developer — EXCEED IT Services, Amman (Jan 2016 – Feb 2017) · *Gulf IT services and consultancy.*

Built iOS applications from scratch and maintained existing ones, translating requirements into scheduled delivery alongside technical leads and project managers.

COMMUNITY & TECHNICAL WRITING

Stack Overflow — 31,833 reputation — top 10 in the UAE. Gold badges in Swift and iOS; 19 gold, 102 silver, 151 bronze. 678 answers reaching 2.5M developers. Recognized Member, Mobile Development Collective (2023).

Publications — Nine technical articles on Flutter, Dart and Swift, including in Better Programming. Selected: "Flutter Space Tour" (2024), "What's New in Dart 2.17" (2022), "Combine Framework: First Impression" (2019).

HackerRank — 5-star gold badges in Problem Solving and SQL.

EDUCATION & CERTIFICATION

BSc Computer Information Systems — Yarmouk University, Irbid, Jordan

2009 – 2014

Professional Scrum Master I (PSM I) — Scrum.org, 2026
